

Nexus Web Design

Client Website Guide & Frequently Asked Questions

This guide explains the basics of websites, hosting, domains, business email, support, and ongoing website management in a simple and easy-to-understand way.

Simple • Professional • Built To Help Your Business Grow

Understanding The Basics

Websites are usually made up of several systems working together:

Domain Name — Your website address (example: yourbusiness.com.au)

Website Hosting — The service that keeps your website online

Business Email — Professional email addresses such as info@yourbusiness.com.au

Website Files — The actual content, design, and code of your website

Who Owns What?

Clients should always own:

- Their domain name
- Their business email subscription
- Their branding and content

Nexus Web Design can still help manage the technical setup, hosting configuration, and website deployment process.

Website Hosting & Management

Modern websites are hosted using cloud hosting platforms designed for speed, security, and reliability.

Hosting management may include:

- Website deployment
- SSL security setup
- Monitoring and maintenance
- Backup and recovery support
- Domain connection and DNS setup

Business Email Setup

Professional business email addresses are usually setup separately from website hosting.

Example:

- info@yourbusiness.com.au
- hello@yourbusiness.com.au
- bookings@yourbusiness.com.au

Google Workspace is commonly recommended because it is reliable, secure, and easy for clients to use.

Website Support & Maintenance

Ongoing support is optional.

Some clients prefer ongoing care plans, while others prefer one-off updates when needed.

Typical support may include:

- Website monitoring
- Small content updates
- Technical troubleshooting
- Backup/recovery support
- Form testing and maintenance

What Is Considered A Larger Update?

Larger development work is usually quoted separately.

Examples may include:

- New website pages
- Booking systems
- Blogs or editable content systems

- Ecommerce functionality
- Major redesigns
- Membership or login areas

Client Editable Content

Some websites can include editable sections so clients can manage parts of the website themselves.

Depending on the project, this may include:

- Events and announcements
- Blogs or newsletters
- Workshop schedules
- Google Sheets integrations
- Notion or CMS integrations

Frequently Asked Questions

Do I need monthly support?

No. Ongoing support is optional. Clients can also request one-off updates when needed.

Can I update my own website?

Yes. Depending on the project, editable content areas can be added for events, announcements, blogs, or news.

Can I add more pages later?

Absolutely. Additional pages and features can be added as your business grows.

What happens if something breaks?

Modern hosting systems provide deployment history and recovery options that can often restore websites quickly if technical issues occur.
